## Dim Sort Control -

### Dimensions Control

**Dim Sort Control** - A system solution to determine the current dimension of your products and is developed in Siemens PLC. This product can be installed on green sorters or dry sorters and the system measures and sorts the correct thickness and width of the sawn product. The system can be supplemented with length measurement and annual ring detection at the end of the product.

**Dim Sort Control** – Provides accurate fact-finding for the thickness and width measurement of each individual product. This is done with the help of several laser photocells.

**HMI** - The operator interface is user-friendly. Viewing takes place in a Touch Panel and there is also access for the system's various parameters and function of calibration.

**System building** – Dim Sort Control consists of a device cabinet, laser photocells, encoders, sensor wiring and operator panel.
